SIGNALLING RECORD SOCIETY
L&NWR SIGNALLING DIAGRAM COLLECTION

Collection contained in two original LNWR Wooden boxes 20 ½ x 13 ½ x3 ½ inches engraved:

Southern Division (SRS 507)
LNW & GW Joint (SRS 506)

The Boxes are presumed to be part of a set covering all the LNWR Divisions and containing diagrams of signalling layouts at all LNWR locations as at 1897/8 (with later additions and replacements).

The two boxes contain a selection of surviving diagrams, mainly from Northern, North Eastern, Central, NN & P and Southern Divisions. The boxes had been acquired by John Swift at some point, probably when the custodian of the collection disposed of what remained.

The remaining diagrams largely are of small places where no material changes occurred, suggesting that the custodian of the boxes was disposing of diagrams as they became out of date (some neat amendments were made to some up to about 1922).

The majority of the diagrams are numbered in the top right, the numbers suggest that the contents of each box/division was numbered in a separate series, starting at 1. Within each series, they appear to be generally in line order. Most diagrams also have a handwritten number (many in red crayon). This appears to be an attempt at a unified system covering all locations in one series, perhaps done in LMS days.

Listing of Box Contents

The Contents of the boxes were listed on an Access database. To separate the LNW number series, a division prefix has been added in front of the numbers. These are notional, and do not fully follow divisional boundaries. For example, some listed under Northern should probably be in the North Eastern, while the North London may have had its own series.

The Printed Lists have been produced in two forms:

- LNW Diagram Number order (By Division).
- Alphabetic by Place Name.

The database can of course be sorted in any way.

SIGNALLING RECORD SOCIETY

Batts Collection of ER Correspondence.

This collection is, as the heading indicates, a collection of Files relating to the Stratford, Norwich and London, Tilbury and Southend Districts. Within these files are both signalling plans and other related matter which for obvious reasons are best left as a 'whole' item.

Further detail regarding the Signalling Plans and Signal Box Instructions can be found on sheets in the front of each individual Box in the Collection.

Index - in Station/Box etc order.

General note: The files in this collection were created by the York S&T Dept in 1968, apparently as part of a broader initiative to identify trackwork and signalling that was surplus to requirements, and to estimate the resulting costs and savings. Each file covers a single location or a section of line. The files generally contain locking sketches for the relevant boxes - sometimes locking tables as well. Some scheme plans are included for the simpler alterations, but where the proposal was to resignal an area, few details of the proposed new signalling are present.

This collection consists of sheets drawn up by Bob Ballard when he was Manager of BR's Collectors Corner (and later as a member of the Railway Heritage Committee), showing equipment (such as block instruments, bells, signal repeaters etc) and furniture present in the boxes he visited. They are arranged in sets by line, and cover most areas of England and Wales. They do not include details of the signals or the layouts controlled.

SIGNALLING RECORD SOCIETY

Batts Collection of ER Correspondence.

This collection is, as the heading indicates, a collection of Files relating to the Stratford, Norwich and London, Tilbury and Southend Districts. Within these files are both signalling plans and other related matter which for obvious reasons are best left as a 'whole' item. *

Further detail regarding the Signalling Plans and Signal Box Instructions can be found on sheets in the front of each individual Box in the Collection.

Index - in Station/Box etc order.
